

Demographics (PM)

Capture Previous Name and Address

You can now capture and store a patient's previous name and address in **Patient Information**. This data can be captured automatically when changing a patient's information, or edited manually via a new icon. Storing this information is a requirement per the ONC 21st Century Cures Act that requires 2015 CEHRT vendors to support the United States Core Data for Interoperability (USCDI) standardized set of health data classes. In a future release, the system will be enhanced to include this information on the patient's C-CDA 2.1/Outbound CIE.

Click the **Patient Info** icon.

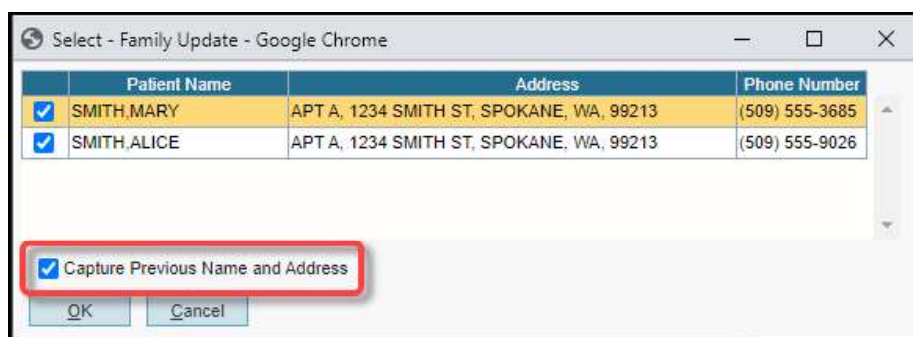

Automatically Capture Previous Name and Address

When you save changes to the name or address of a patient, the system prompts you to capture their previous information.

Note: *The system will retain only the most recent previous name or address captured.*

- If the patient has any responsible party relationships with other patients, the **Family Update** dialog opens with the **Capture Previous Name and Address** check box selected by default.

- Otherwise, a system prompt asks you to capture the previous name and address.

View or Manually Edit Previous Name and Address

To view or manually edit a patient's previous information, click the **Previous Name and Address** icon.

Patient Name: SMITH, MARY
 Chart Number: 5622
 Responsible Party Name: SMITH, MARY
 Apt / Ste #: APT A
 Address: 1234 SMITH ST
 Zip Code: 99213 City: SPOKANE State: WA Country: USA
