New Problem List Selector

Andrew Smith - 2026-07-04 - [Archive](#)

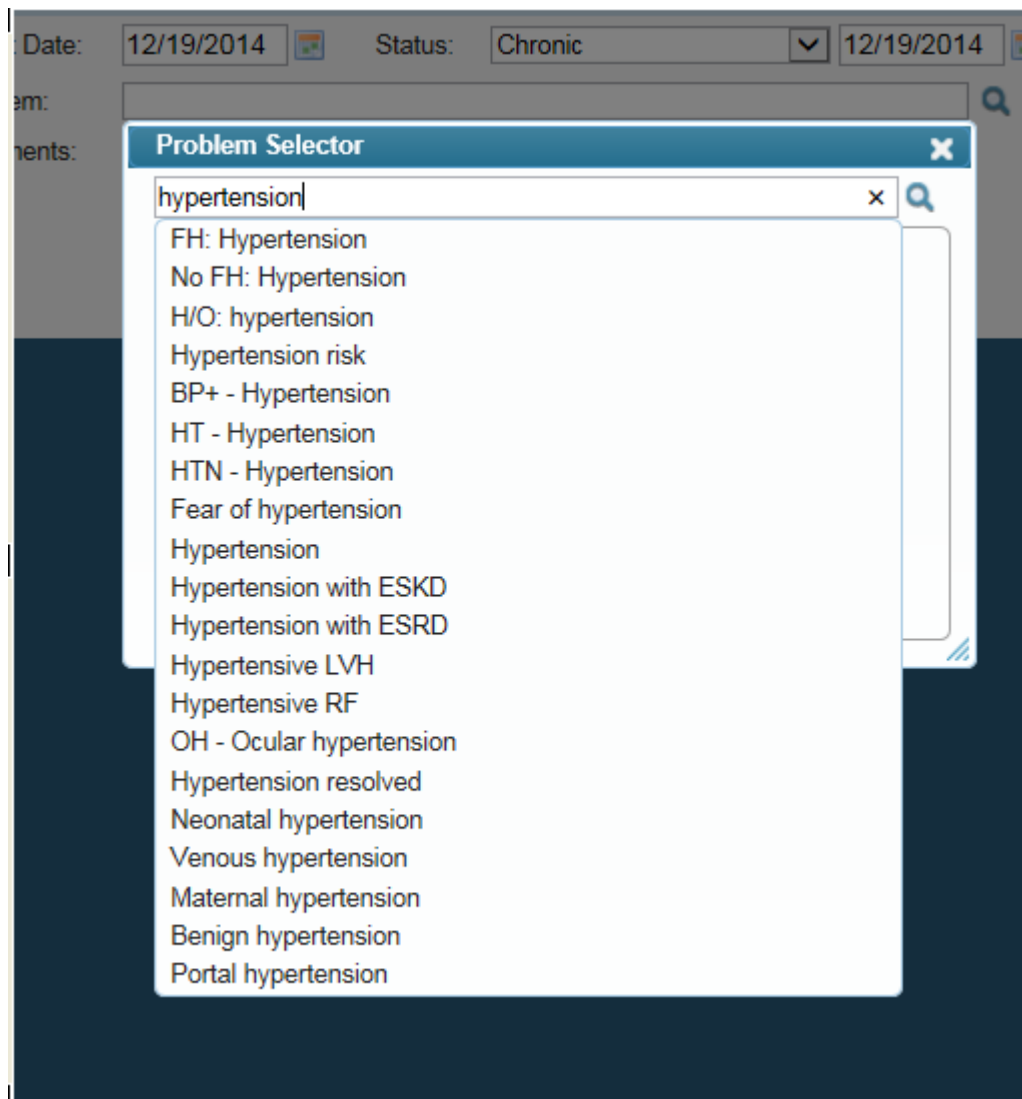

How to Use the New Problem List Selector

The following instructions will show you how to use the new problem list selector which has been updated in AdvancedMD EHR.

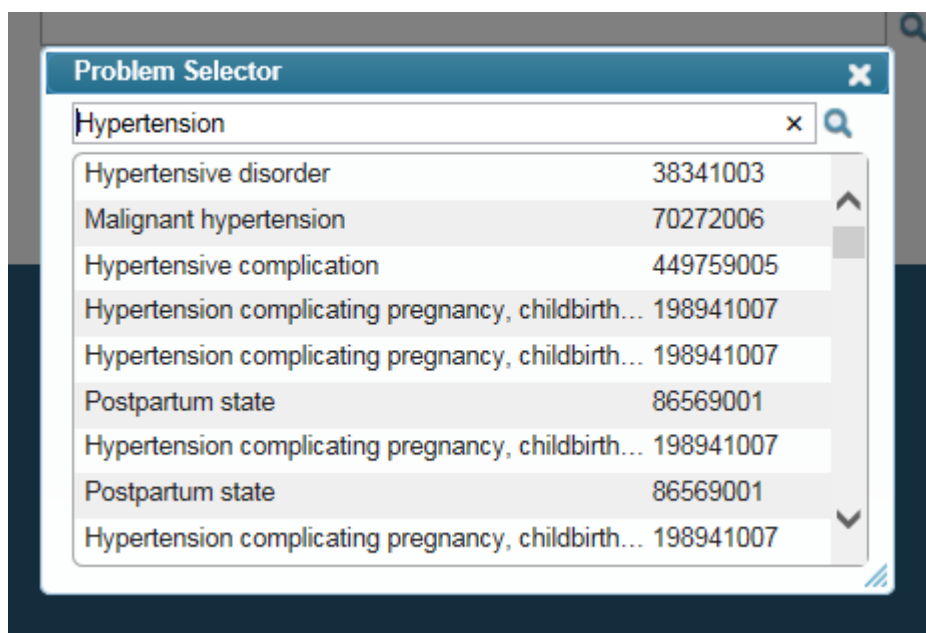

Now, when searching for problems to add to the list, you will see the new Problem Selector.

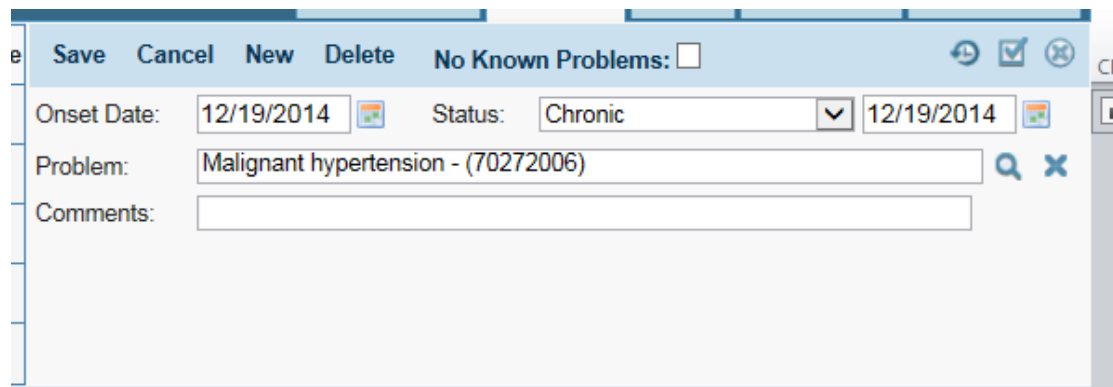

Instead of searching by ICD-9 code, you will have to enter the name of the problem. Once you have entered the name, a list of possible problems will appear so you can select the one for which you are looking.

Once you click on the problem you are searching for, more specific choices relating to the problem will appear.

Click on the specific problem from this list. Once selected, click "Save" to add it to the problem list.

The screenshot shows a software window with a light blue header bar. The header contains the following elements from left to right: a small 'e' icon, the text 'Save Cancel New Delete', a checkbox labeled 'No Known Problems:' which is currently unchecked, and three icons: a refresh icon, a checkmark icon, and a close icon. Below the header, there are three rows of input fields. The first row is labeled 'Onset Date:' and contains two date pickers, both showing '12/19/2014'. The second row is labeled 'Problem:' and contains a text input field with the text 'Malignant hypertension - (70272006)'. To the right of this field are a magnifying glass icon and an 'x' icon. The third row is labeled 'Comments:' and contains an empty text input field.
